To Whom It May Concern:

I have had the opportunity to work with ARCO Electric on the reconstruction of Davis High School in Kaysville, Utah. This was a difficult and unique project as a 320,000 plus square foot new building was built between and around the existing high school and facilities.

I have been impressed with ARCO's ability to stay on schedule and deal with problems as they would arise. I have been very impressed with Jeremy and Jamie, the foremen on sight. They have demonstrated a high level of attention to detail and foresight, as they have strived for a quality project.

We had an unfortunate event on sight where a subcontractor to ARCO caused some extensive damage to items in the existing building. ARCO responded to the problem and dealt with it quickly and fairly.

This project had a tight time schedule, and presented some difficulties and challenges in scheduling and construction with the phasing of the project. This project was also one of high profile within the community and the District which added a great deal of attention. ARCO was effective in dealing with all the issues and delivered a quality job on time.

Sincerely,

Eric Flint
Coordinator, Construction Services
